

Two counterfactuals, one at a time: the surface is the frontier, the line is the actual path

(a) Shooter development frozen,
shot selection as observed

frontier rises by 0.0 points at fixed risk
actual path rises by 1.7 points
shortfall below frontier 4.08 → 6.13

(b) Shot selection frozen,
shooter development as observed

frontier rises by 6.3 points at fixed risk
actual path rises by 9.3 points
shortfall below frontier 4.08 → 6.06
